DETAILED ACTION

1. Applicant is advised that the Notice of Allowance mailed January 23, 2007 is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.
2. Prosecution on the merits of this application is reopened on claims 3-5, 7-9, and 12-14, considered unpatentable for the reasons indicated below:

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 3-5, 7-9, and 12-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.
5. Claims 3, 7, and 12 each recite only logic and configuration thereof. Logic may be fully embodied in software (paragraph 0029). Therefore the claims may be directed to software per se, and thus nonstatutory. Terms argued as making the claim statutory do not. "A system" does not, because the system as claimed only comprises software. The term is routinely used to describe only software, as in "operating system". Logic "connectable to the virtual bus interface" does not, first since this interface is a software construct and the "connection" from one software to another is software, and second

Art Unit: 2188

because the claim is directed only to the logic, and does not require the virtual bus interface in order to be “connectable” to it. Logic configured to determine something about “a processor” does not make it statutory, since the claim is directed only to the logic, and does not physically require the processor in order to be configured as described. Claims 4-5, 8-9, and 13-14 incorporate these limitations by dependency, and do not add statutory elements to overcome the rejection above. Although claim 8 appears to introduce a method step, the claim depends upon a system claim, and thus the step should be interpreted as further limiting how the detection logic is configured (see 35 USC 112 rejection below).

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 8 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

8. Claim 8 recites “the detection logic determines”, which appears to add a method step. However, claim 8 depends on claim 7, which is a system claim reciting “detection logic operably connectable [and] configured to ...”. It is not clear if or how the method step further defines or limits the system limitation as recited in claim 7. Claim 9 incorporates this limitation by dependency, and further refers back to the “determining” step.

9.

Allowable Subject Matter

10. Claims 16 and 17 are allowed.
